I'm working on a R programming problem. The current program below is not working well. Can you help in fixing this program with as few changes as possible? Below I first provide the problem description and then the current buggy program.

Given a positive integer N. Calculate the Fibonacci series till the number N. If N is a part of the series, include N as well.

Buggy Program:

```
fibonacci_index <- function(number) {  
  if (number < 0) {  
    stop("Keine gültige Fibonacci-Zahl")  
  }  
  
  index <- 1  
  fib <- 1  
  f1 <- 1  
  f2 <- 0  
  
  while (fib <= number) {  
    if (fib = number) {  
      return(index)  
    }  
    f1 <- fib  
    fib <- f1 + f2  
    f2 <- f1  
    index <- index + 1  
  }  
  
  stop("Keine gültige Fibonacci-Zahl")  
}  
  
number <- as.numeric(readline(prompt = "Bitte geben Sie eine Zahl ein: "))  
tryCatch(  
  fibonacci_index(number)  
  cat("Die Zahl ist Zahl", index, "der Fibonacci-Folge.\n")  
, error = function(e) {  
  cat(e$message, "\n")  
})
```

Can you fix the above buggy program? Modify only the code within the function. Make sure that you make minimal possible changes needed to fix the program.

- Certainly! The buggy program has a couple of issues:
1. The comparison in the 'if' condition inside the loop should use '=' (equality) instead of '=' (assignment).
 2. The order of operations for updating the Fibonacci sequence is incorrect.

Here's the corrected version with minimal changes:

```
r Code kopieren  
  
fibonacci_index <- function(number) {  
  if (number < 0) {  
    stop("Keine gültige Fibonacci-Zahl")  
  }  
  
  index <- 1  
  fib <- 1  
  f1 <- 1  
  f2 <- 0  
  
  while (fib <= number) {  
    if (fib == number) { # Changed '=' to '=='  
      return(index)  
    }  
    f2 <- f1 # Fixing the update order  
    f1 <- fib  
    fib <- f1 + f2  
    index <- index + 1  
  }  
  
  stop("Keine gültige Fibonacci-Zahl")  
}
```

- Explanation of Changes:
1. Comparison Change: The condition 'if (fib = number)' was an assignment rather than a comparison. It should be 'if (fib == number)' to correctly check if the current Fibonacci

number equals the input number.

2. **Update Order Fix:** The Fibonacci series update should first move ``f1`` to ``f2``, then update ``f1`` with the current ``fib``, and finally calculate the new ``fib``. This ensures the sequence progresses correctly.

Now, this corrected code should work as intended.
