

Copilot

That's great to hear you're learning Python! Here are five easy programming tasks for you to practice:

1. **Sum of Two Numbers:** Write a program that takes two numbers as input from the user and prints their sum.
2. **Odd or Even:** Create a program that checks whether a given number is odd or even.
3. **Simple Calculator:** Develop a basic calculator that can perform addition, subtraction, multiplication, and division based on user input.
4. **List Average:** Write a program that calculates the average of a list of numbers provided by the user.
5. **Palindrome Checker:** Create a program that checks if a given string is a palindrome (reads the same forwards and backwards).

Happy coding! If you have any questions or need further assistance, feel free to ask. 😊
