

Copilot

Sure, I'd be happy to help!

(1) Description of the Bug(s) and Required Fixes:

1. **Return Statement Missing:** The `findGCD` method does not return the GCD value.
2. **Method Call Issue:** The `findGCD` method is called without the `self` parameter, which is required for instance methods in Python.
3. **Class Method Definition:** The `findGCD` method should be defined as a `staticmethod` or `classmethod` since it does not use any instance-specific data.

(2) Concise Single-Sentence Hint:

Ensure the `findGCD` method returns the GCD value after the loop completes.

Feel free to ask if you need more hints or further assistance! 😊
