Sure, I'd be happy to help!

(1) Bug Description and Required Fixes:

The main issue with your program is that the `find_gcd` function does not return any value. In R, a function needs to explicitly return a value using the `return()` function or by placing the value to be returned as the last expression in the function.

(2) Hint:

Ensure your function returns the GCD value after the loop completes.

Good luck with your debugging! If you need more help, feel free to ask. 😊
