

Copilot

Sure, I'd be happy to help!

(1) Description of Bugs and Required Fixes:

1. **Return Value:** The `findGCD` function does not return the GCD value. You need to add a return statement to return the value of `A` after the loop ends.
2. **Method Call:** The `findGCD` method is not called correctly. It should be called on an instance of the class or defined as a `staticmethod`.
3. **Class Method:** The `findGCD` method should be decorated with `@staticmethod` since it does not use any instance-specific data.

(2) Hint:

Hint: Ensure that the `findGCD` method returns a value.

I hope this helps! Feel free to ask if you have any more questions or need further assistance. 😊
