## Copilot

Sure, I can help with that! The issue with the current program is that the `find_gcd` function does not return any value. To fix this, you need to add a return statement at the end of the function. Here's the corrected code with minimal changes:

```r
find_gcd <- function(A, B) {
  while (B != 0) {
    temp <- B
    B <- A %% B
    A <- temp
  }
  return(A)
}

A <- 56
B <- 98
gcd <- find_gcd(A, B)
cat("GCD of", A, "and", B, "is:", gcd, "\n")
```

This should work correctly now. Let me know if you need any further assistance!
